Where They Found MRSA

MRSA has been found in and around commonly-used equipment and shared spaces where contagions can spread and thrive freely.

Bacteria-Killing Light Packages

Using antimicrobial blue light technology, LumaBlue LEDs produce specific light waves to kill surface bacteria in as little as a few hours, without the use of chemical solutions.

Research and Testing

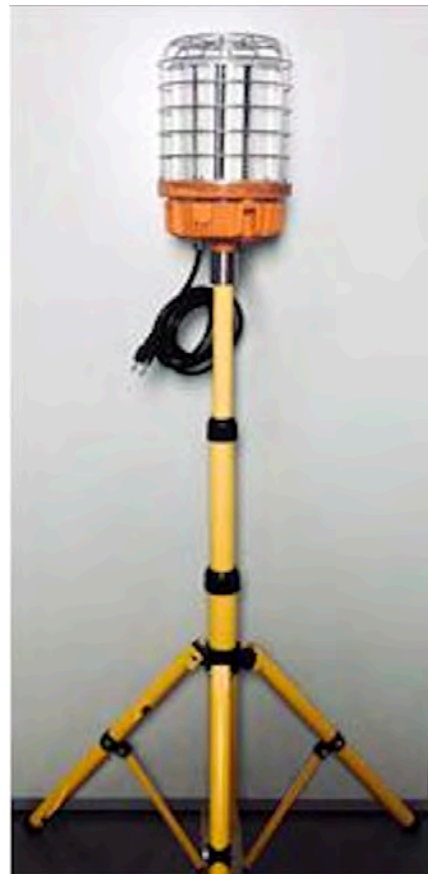

Don't be left in the dark about SAFE BLUE LIGHT bacteria-killing technology. Professors and research teams from Harvard University, the University of Wisconsin and San Diego State University have proven that blue light LEDs kill a wide variety of bacteria and assists in the removal of contagions.

Safe and Affordable

LumaBlue LED lights can be used continually around staff and customers while working to protect businesses and workspaces against harmful bacteria.

Powerful, Portable, Bacteria-Busting LED Package

Our powerful, easy-to-install portable 120W system can be used as a hanging anti-germicidal lamp or as a floor-based tripod. Ideal for a variety of markets, including **salons, gyms, medical facilities, manufacturing, schools** and more—simply turn on and use!
